OUTCOME:

Education has been sharply disrupted around India and the world by the COVID-19 shock. Public schools in India have been mostly closed and are likely to remain so for the entire academic year. This presents one major threat and two opportunities.

The threat is that the learning crisis will worsen. Children who have missed a year of school—especially those without educated parents—are likely to have regressed in their learning and suffer long-term learning losses. Yet, there may also be two important longer-term opportunities. The first is the rapid acceleration in the use of education technology by both households and the government. Given evidence of strong positive effects of personalised instruction, the widespread adoption of education technology may help accelerate the NEP's stated goal of reducing the digital divide and leveraging potential benefits of technology for education, such as opportunities to increase student engagement and personalise instruction to individual student needs.

Around this verge; "National E-conference on NEP 2020" proved to be the meeting ground for the Research Scholars, Lecturers and students from various corners of academics. It was an effective platform to share their knowledge and ideas.

CONCLUSION:

The one-day conference gave a lot of information on how research is useful in various facets of NEP 2020.
